# Coil Data (continued)

### Ambient temperature vs. coil voltage - 1W coil

Data below are average values and should be verified in application. Tests were conducted within a 2' (.6 m) cube (still air); at nominal coil power @ 25°C; with normally open contact loaded; and with 4' (1.22 m) long, #10 AWG load wires. P.C. board relays were mounted to a 30A, single side P.C. board. Coil rise test conducted with a 30A PC board to maintain 20°C max. rize at 30°C. The relay connections and wiring must be designed with an adequate cross section to ensure proper current flow and heat dissipation.

2) Remove knock-off nib after cleaning process for optimum life of wash-tight relays.

T9AS - Mounting and termination code 2

T9AP – Mounting and termination code 5

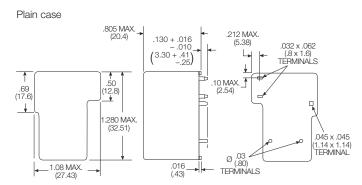

Note: Recommended mounting screw torque is 4.0-5.0 lbs.in when #6 screw is used.

<sup>3)</sup> Operating ambient temperature must consider "Must Operate Voltage Change Over Temperature," Contact Temperature Rise, Coil Temperature Rise (If coil is not allowed to cool) and Maximum Coil Temperature. Specification ambient considers 20A load with coil cooled to ambient.
